

# OIL SANDS FACILITIES

## BENEFITS

### of Dry Ice Blast Cleaning

- ◆ Improved worker safety. Far less exposure
- ◆ Environmentally friendly
- ◆ Less cost. Clean *faster with less workers*
- ◆ Less down-time by cleaning equipment in place
- ◆ Clean hot and on-line
- ◆ Eliminate the use of expensive chemicals and solvents
- ◆ More thorough clean
- ◆ Reduced waste disposal as dry ice sublimates upon contact

Remove heavy hydrocarbons the quick and easy way...

**Discover the benefits of dry ice blasting with Brothers Industrial Services Ltd.**

Recovering bitumen and transforming it into synthetic crude oil is dirty work, *literally and environmentally*.

As the worldwide debate continues on "Canada's controversial oil sands", many reputable companies who operate oil sand production facilities are closely scrutinized. As environmental regulations and expectations are becoming more stringent, general facility housekeeping has *never been so important* but is often neglected as there simply "is no solution to keeping up". Unfortunately this can have catastrophic implications on the public's first impression.

**Dry ice blasting is the solution!**

In addition to being clean and safe, it is important to remember that dry ice is obtained as a byproduct of other industrial processes. It does not produce CO<sub>2</sub> or add CO<sub>2</sub> to the atmosphere and therefore does not contribute to the "greenhouse effect"

**Dry ice blasting is truly, and completely, environmentally friendly!**

As you can see below the results from dry ice blasting can return equipment to "near new condition". These results can be achieved with a decrease in manpower by up to 3 times **and** in **half** the time!
