

INDUSTRIAL TUBE CLEANING

Advanced CO2 Cleaning Solutions

Has your efficiency taken a turn for the worse?

Then discover superior results with dry ice blasting by Brothers Industrial Services.

BENEFITS of dry ice blasting

- Dry process - (no wet refractory)
- No secondary contaminant - reduced clean-up
- Reduced manpower
- Reduced cleaning time/down time
- Harsh chemicals eliminated
- Non-abrasive - can not rupture tubes
- Reduced debris for disposal

Whether positioned in a furnace, OTSG, HRSG, boiler, reformer or the likes, a tube meant to transfer heat must be clean. Unfortunately as these units are engineered, there seems to be very little consideration for cleaning. Brothers has adapted to many different scenarios over the years with specialized procedures and tools to make these tasks possible.

Heat transfer is big business and we take it very seriously. We know the importance of clean tubes and as Canada's most experienced Industrial dry ice blaster we have the support and the resources to deliver the most effective cleaning in the industry.

Whether it be a last minute emergency outage or a planned shutdown, you can always count on Brothers to safely deliver a practical and successful solution to your industrial cleaning needs!
