

# Mining Equipment Cleaning

**Are your service technicians spending too much time cleaning prior to servicing?**

## **BENEFITS of dry ice blasting**

- Reduced manpower/downtime
- Eliminate harsh chemicals
- Increased new part longevity due to clean install - minimize asset failure
- Non-abrasive, able to expose cracks and defects in wear parts
- A dry process – can work around electric components
- Clean radiators in less time with incomparable results

Our dry ice blasting unit's clean equipment in a fraction of the time with superior results. The last thing you want to do is spend too much time cleaning prior to a major repair, adding to down-time and cost. We work hand in hand with the service techs providing the pre-cleaning services necessary to do their job.

Whether your business is oil sands, coal, diamonds or potash, surface mining is extremely hard on equipment. Service personnel must be capable of repairing equipment in any location at any time, regardless of the weather. Brothers Industrial Services offers mobile dry ice blasting units to come to your site and provide the cleaning necessary.

Properly cleaning an area prior to installing new parts means less breakdowns. Protect your assets, allow the service techs to do what they do best and get Brothers to do the rest!
